Investment Thesis

Increasing Services and Efficiences in Aviation

I am initiating coverage of AAR Corp with a LIMIT BUY at \$39.82 and a \$47.78 price target. AAR is a diversified provider of products and services to the worldwide aviation and government and defense markets. I view AIR as a company that continues to leverage their current contracts by introducing efficienes in production and servicing. As well as continuing the majority stanard commercial purchase orders. Their steady aquisition of contracts and reduction of low-margin businesses also provides a value opportunity.

For the long:

1. Continuning pushing for growth in military contracts

Focusing on growth and execution of programs with customer relationships in international commerical and government customers. The company completed a ramp - up of 15 years, U.S. Air Force Landing Gear Performance-Based Logistics One program, providing total supply chain management. Including purchasing, distribution, and inventory control for all landing gear components for the Air Force. As well as a ramp - up of a contract with the Department of State leveraging capabilities in service for a 10-year performance-based contract to globally operate and maintain aircraft. 2. Growth Profit Margin increasing in key segments:

Driven by the Department of State contract the (INL/A WASS program) the gross profit on government and defense customers increased 64.9% of the fiscal 2019. The gross profit margin increased to 20.4% from 20.2%. from fiscal 2019 to fiscal 2018. With the largest sensitivity highlighted below on Enterprise Value to EBITDA of 52.88% this is a positive as long as the company can increase margins as the continue to push revenue growth. I believe this is a continuing trend in the company.

3. Flexibility in Balance Sheet to invest in Growth

Cash on hand and avaiable credit facility increased to \$465 million. The company is in a great finanical postion compared to some of its peers. Their debt levels remain in check with flucuations occurring due to their contractual needs with customers

For the short

1. Unability to reduce carrying value of assets

The company owns and distributes assets that may not be useful to the company in the future. The company has recorded these assets as non-recoverable and incurred impairment charges to reduce the carry value. In fiscal 2019 the imparement was \$74.1 million and in 2018 \$54.2. With the discontiuation of "COCO" (Contractor owned, contractor operated business) the inability to sell these assets and contracts may also increase the carry value of these useless assets.

2. Increasing cost in Aviation Services commercial segment:

Their largest segment, Aviation services, consists of 95% of their gross profit. Commerical gross profit consists of 62% of this segment. Last year the company saw a reduction in margin for this segment because of labor shortages. This caused an inability to meet demand from customers. A continuation of this trend would prove detremental to the price.

Key Catalysts for price change

- Increasing high-margin contracts with governments
- Increasing efficiencies in Aviation Services segment
 Continuing to discontinue low-earning pieces of business

aluation

10.39%

9.2%

My \$47.78 price target is derived from Discounted Unlevered Free Cash Flow estimates with a weight of 50% as well as a triangulated EV/EBITDA multiple of 10.9x.
